

PORCELAIN VENEERS: FIVE REASONS TO CHOOSE THEM.

According to oral health experts, veneers can be used to bridge the gaps or fix small misalignments. Patients prefer veneers as a cosmetic solution to get aesthetic teeth. Additionally, **Dental Veneers Uptown** effectively correct oral issues like discoloration, fractures, or chips. If the gaps between your teeth cause a defective smile, **Porcelain Veneers Houston TX** can be the best [Veneers on Crooked Teeth](#).

What are Porcelain veneers?

Porcelain veneers are wafer-thin transparent layers of porcelain attached to the front teeth perfectly for correcting minor imperfections in the users' smiles. Not only do veneers offer a flawless smile, but they can also boost their confidence.

Why Porcelain?

Porcelain resembles the tooth enamel offering you a shiny brighter smile. Reasons to choose this method include:

1. An effective solution for small cosmetic issues:

Dental Veneers Dentists recommend this method when you have a chipped front tooth. Porcelain veneers not only fix a chipped tooth but also hide discoloration and close small gaps between front teeth.

2. Offer natural appearance:

Porcelain veneers are designed to match the natural tooth enamel. During the first visit, the **Houston veneers specialist** takes an impression of the patient's teeth. Then his/her impressions are sent to the dental lab to manufacture veneers. On the second visit, the best **cosmetic dentist near me** will make slight adjustments to the shade that will exactly match your teeth' color. Unlike other types, porcelain veneers offer a natural look to your teeth.

3. A minimally invasive procedure:

Besides other tooth restoration methods, the dentist need not remove as much tooth enamel to create enough room for porcelain veneers. That's why most patients prefer this option as they can have more tooth enamel with veneers. No anesthesia needed during the implementation of porcelain veneers.

4. Easy to maintain:

Users need to make extra effort to maintain the porcelain veneers. They can take care of them like they maintain their natural teeth. This means users have to brush twice a day and floss once to eliminate plaque on a regular basis. In addition, make sure to visit your [veneers specialist](#) for regular checkups. This easy maintenance will offer pearly white veneers so that you can enjoy a flawless smile. Since the porcelain veneers are resistant to stains and tooth decay, they can last for a long period of time.

5. Durability:

Porcelain veneers are non-porous resulting in resistance to stains and cavities and can have a long life. Also, if users avoid hard foods like ice, porcelain veneers can last for more than a decade.

An Easy, In-Office Procedure:

The porcelain procedure can be completed in two dentist visits. In the first visit, veneer teeth are prepared using the impressions of the patients' teeth. On the basis of the impressions, the lab technician manufactures them. Until and unless your permanent veneers are ready, the dentist places temporary veneers over the surface of the teeth. In the second visit, you will get permanent veneers to get bonded on your teeth.
