

Can Porcelain Veneers Fix Crooked Teeth?

Porcelain veneers are made of thin, light, tooth-colored porcelain material placed in the front of the teeth. These cosmetic restorations can conceal many dental issues and imperfections in your teeth. However, they cannot fix the underlying dental problems in your mouth, such as poor biting. So before placing dental veneers, consult your [Dental Veneers Houston](#), which would be a good solution for hiding the appearance of crooked teeth.

Candidates for **porcelain veneers for crooked teeth** are likely to have a single crooked tooth or a rotated one, small spaces or gaps between your teeth, and overcrowding of teeth.

Benefits of Veneers:

Since **Teeth Veneers** can only change the appearance of your teeth, they work best in the front of your mouth. If you have a problem cleaning crooked teeth and affecting your bite, your **Houston cosmetic dentist** will offer you a more permanent solution for your crooked teeth. Preceding further process, you must have healthy teeth and gums before proceeding, and they are not suggested for candidates who have gum disease.

Dental veneers can fix your teeth if you have deep stains, previous injuries, or medications. Dental veneers are the best to choose for improving them. Even cavities, swellings, uneven surfaces, and crooked tooth edges can all be fixed with dental veneers.

Dental veneers are beneficial as they can cover other dental issues and imperfections of your teeth. Picking dental veneers can be a good option for cosmetic reasons.

Compared to the Invisalign veneer process is quicker in treating crooked teeth, whereas Invisalign can take a year. Veneers are durable and long-lasting, providing a natural tooth appearance.

They are vital with low maintenance and increase your confidence while speaking and smiling.

How long will dental veneers cover imperfections?

Dental veneers last for 15 to 20 years, and If you do not engage in harmful habits and take good care of your veneers, your dental veneers can last longer. **Best Veneers** can bring back your beautiful smile with just a visit to your **cosmetic dentist Near Me**.

How do they work?

These Dental Veneers work by covering the front part of your tooth with a light-thin layer of porcelain material that your dentist use for fillings. Your dentist will extract a small piece of enamel from your tooth and place the veneer. It helps in maintaining the same thickness of the tooth as your natural tooth. You can cover your full mouth or a particular tooth with dental veneers.

Most patients choose dental veneer for front teeth because these are the teeth that most people see while you talk or smile. Your **top-rated dentist** will design your tooth shape dental veneer and place a temporary one until the permanent dental veneer is designed.
