

# DENTAL VENEERS: HOW CAN THEY OFFER YOU BEAUTIFUL SMILE?

Cosmetic dentistry will offer you a wide variety of cosmetic dental procedures including veneers. [Veneers For Teeth](#) are great for fixing problems with the appearance of your teeth and can also provide a layer of protection for a tooth that has been damaged or cracked. Veneers have become popular over the past few years and are a great alternative to more invasive methods of improving your smile by **cosmetic dentistry clinics**.

**What materials are they made from?**

**Best Veneers** are made out of two different types of materials. Porcelain veneers are the type of veneers that look the most like a natural tooth. They are less likely to stain and are a little bit thicker so they do require removal of a bit more of the tooth enamel that they will be covering.

The other type of veneer is composite resin veneers. This type of veneer is thinner than the porcelain veneers and does not require the removal of as much of the teeth that they are applied to. Composite resin veneers do look like a natural tooth but not quite as much as the porcelain veneers.

## Dental Veneers Installation Procedure:

When you have decided to have veneers applied to your teeth, you will need to make a few visits to the **cosmetic dentist Houston** at the office.

- The first visit will consist of a consultation where you will discuss exactly what you are expecting to see after the veneers are applied to ensure that the veneers will be able to accomplish exactly what you want the results to be.

- When you arrive at your [Houston cosmetic dentist](#) office for your second visit, the **Best Dentist For Veneers** will take an impression of your teeth that the veneers are to be applied to. Since veneers are custom made for each individual it is important to have the impression of the teeth so the fit will be perfect once it comes time to apply them. The enamel on your teeth is shaved down to make room for the veneers to be applied on your next visit. Temporary veneers can be applied at this point to protect the teeth since some of the enamel of the teeth has been removed.
- The last visit for veneers at your cosmetic dentist clinic will consist of the dentist fitting and applying your new veneers to your existing teeth. In the process, any final shaping that may be needed can be done and if the color isn't just right, it can be adjusted. After this visit, your new smile is complete and you will look just absolutely wonderful.

## **How Can You Save Money When Deciding To Get Dental Veneers?**

If porcelain veneers are out of your budget, you may choose the less expensive forms of veneers such as instant veneers. However, such forms are only short-term solutions and fail to match the benefits of porcelain veneers.

Other ways to save money on dental veneers involve finding an affordable dentist office near your location. Also, you can search for a dental office offering DSPs(Dental Saving Plans). When you are signed up for this plan, your payable amount for the dental procedure will reduce significantly.
