

COSMETIC DENTAL VENEERS: HOW THEY OFFER PERFECT SMILES?

The field of dentistry has made a number of advances in recent years. **Dental veneers** are one such advancement. These are used to correct a number of cosmetic dental problems such as chipped or broken teeth, minor misalignments, and discolorations. [Teeth Veneers](#) are very popular because they provide effective results. Once installed at **cosmetic dentistry clinic Houston**, they will have a long life if proper care is taken. However, on the minus side, **Veneer For Crooked Teeth** is a little costly and requires the services of a cosmetic dentist to be installed.

[Dental Veneers Houston TX](#) are made from porcelain. Porcelain is used because its properties are very similar to that of natural enamel. Both enamel and porcelain are slightly translucent. When light settles on the enamel layer, it enters and gets reflected by the underlying dentine layer. Because of this reason, natural teeth have a very unique luster. Veneers have the same appearance as normal teeth.

Installation Procedure:

Veneers are installed by a surgical procedure that can last a few hours. First, a thin layer of enamel is removed from the teeth by a **veneer specialist Houston**. In other words, teeth are ground down. This is done to give the veneers a better grip over the teeth and to make them look proportional. In the second step, **Dentist For Veneers places** temporary veneers over the teeth. Permanent veneers are manufactured in a dental laboratory. They are manufactured

in such a way that they look very similar to surrounding teeth. Temporary veneers are then separated and permanent veneers are installed.

Cost of dental veneers:

Dental veneers are comparatively costly. They can cost as much as \$750-\$2000 per tooth. The cost will rely on the caliber of the material. Cheaper veneers are made up of blocks of porcelain employing a machine. On the other hand, costly veneers are made by hand. They are made in such a way that they appear very similar to surrounding teeth. They are the more suitable choice if you can afford them.

Benefits of dental veneers:

Veneers are a smart cosmetic solution:

Veneers are a life-changing solution for people who are not happy with the appearance of their teeth. Cosmetic issues that can easily be addressed using porcelain veneers are:

- Chipped teeth
- Absent teeth
- Spaces between the teeth
- Twisted teeth
- Badly stained or discolored teeth

Usually, braces or other orthodontic treatments can be used to treat gaps between the teeth but some people opt for veneers. Veneers perfectly hide the cosmetic issues in such a way that nobody hardly gets to know your dental issues.

Veneers are strong and enduring:

Porcelain veneers are permanent and are resistant to decay and stains because they are not porous. If they are maintained properly, they can last between ten and fifteen years.

Maintenance of dental veneers is easier:

There are no special requirements to take care of dental veneers. Its maintenance is similar to the caring of your natural teeth which means you have to brush and floss them twice a day to maintain the natural white shine to your teeth.

There are alternatives to dental veneers. One such alternative is Lumineers. Lumineers are a special type of dental veneers which are made from dental-quality porcelain known as Cerinate. Lumineers are more reasonable and at the same time are also more profitable. The procedure to install them is much simpler. If you have to choose between conventional veneers and Lumineers, it is always better to opt for the latter.
