

# Ways To Straighten Your Teeth With Cosmetic Dentistry

Not liking your misaligned teeth? You are not the one facing this problem. There are many people around with misaligned teeth problems. Many people have visited cosmetic dentistry for their cosmetic issues, making them conscious about their looks.

Teeth issues can cause other problems, too, if not treated properly. Good oral health is essential for a proper bite and [straight perfect teeth](#). Teeth that are not properly aligned can lead to tooth decay and sometimes gum diseases. But with cosmetic dentistry, many options are available to straighten your teeth.

There are several ways to treat crooked and misaligned teeth without being noticed, like metal braces. Cosmetic dentistry is a mind-blowing way to smile boldly without any cosmetic issues, and they work very well and treat your teeth ideally to change your appearance.

So, here are some common and most-used treatments for straightening teeth. Then let's get started it!

## **Invisalign**

Invisalign is the best solution to straighten your teeth without wires and brackets so you can align your teeth. The Invisalign treatment takes upto one year to complete the whole orthodontic treatment, whereas the traditional orthodontic treatment takes more than that.

Invisalign is like a tray that is placed in your mouth. Your dentist will teach you how to remove and install them again in your mouth when you eat or drink. They are easy to clean as they are removable, and if you have to correct only a few teeth, the trays will decrease with time as the treatment ends.

Moreover, an Invisalign can suit you the most as it does not interrupt your appearance because it is invisible, transparent, and cannot be seen until you tell the other person about it.

Suggest to your dentist if you are a good candidate for Invisalign.

### **Porcelain veneers**

They are custom-made according to your teeth impression taken by the dentist to conceal your flaws, including the shape or size of your teeth, colour, and transparency.

Dental veneers can be a good option for many people because they straighten smiles, hide flaws like stained teeth, and beautify your misaligned teeth to [straight white teeth](#). This additional point makes veneers a popular [cosmetic dentistry](#) treatment and an effective tool that allows them to be the one.

Veneers disguise crooked teeth and cover all flaws. The dentist uses **Temporary Veneers** until the permanent one is made. The dentist shapes the veneer matching it to your natural teeth and the colour. With good care and maintenance, this teeth-correcting tool can last for years, keeping your smile straight and bright.

### **Porcelain Crowns**

Crowns are also one of cosmetic dentistry's popular tools to straighten teeth. A crown is a cap that covers your teeth and allows them to straighten or is used for crooked or mishappen toot, making your smile beautiful.

Dental crowns are also used to cover your teeth' flaws completely with dental veneers.

The crowns are designed specially to blend with your teeth' colour.

### **In Conclusion:**

Schedule a consultation with your [cosmetic dentistry Uptown](#) and book an appointment if you consider any treatments. Your dentist will give you the right path to smiling.
