

All that you should be knowing about functional skills.

The emphasis in this course is not on memorization but on the development of analytical and problem-solving abilities in mathematics. You'll benefit from learning arithmetic that has real-world applications in both school and the workplace.

We also want to persuade those who have been "turned off" by mathematics that the discipline has many advantages.

In your class, there will be ten to fifteen students and one teacher.

You'll have to put in time studying on your own.
