

What Is The Treatment For A Chipped Or Broken Tooth?

Suppose you experience something that looks like your teeth that don't melt or dissolve while eating something hard candy or crunching ice. Although the enamel, the outer layer of your teeth, is the hardest, have the most mineralized tissue in your teeth.

Falling, receiving a blow to your face, or biting down something hard, particularly if you have decayed teeth, can cause a tooth to break or chip.

If you find you have a broken or chipped tooth, don't panic because your dentist can save your tooth structure with a [cracked tooth filling](#).

How to Care for a Chipped, Broken, or knocked Tooth?

If your teeth are broken, chipped, or knocked, you should consider visiting a dentist as soon as possible. Otherwise, your Tooth further deteriorates or becomes infected, possibly causing tooth loss.

Till you contact [Urgent Dentist Near Me](#), here are some self-care tips to help:

- If the Tooth generates immense pain, you may use the recommended over-the-counter pain reliever.
- You should rinse your mouth with salt water.
- Due to a break or chipped Tooth, if you experience a sharp or edged tooth, cover it with a small piece of wax paraffin or use sugarless chewing gum to keep your tongue protected and safe from the cuts.
- You should also avoid eating from broken teeth side.

Dental treatment for a broken or chipped tooth will depend on the severity of the case. If only a tiny piece of enamel is broken, the repair needs just one dental visit. However, a badly or severely damaged Tooth may require a lengthy and costly procedure. Therefore you should contact [Emergency Dentistry Near Me](#) if you find even a tiny part of the Tooth is broken or chipped.

What is the Treatment for Broken, chipped, or Knocked-Out Teeth?

A knocked-out or accidental permanent Tooth is a dental emergency that can be reimplanted or inserted in many cases but has higher chances if the treatment is done within thirty minutes.

Collection of Teeth Fragments

- You should handle teeth carefully because damage may prevent the reimplantation of teeth.
- Touch it with the crown or top part of the Tooth, do not touch the roots of the Tooth.
- Rinse the Tooth gently in a water bowl for less than 10 seconds if there is dirt or matter. Do not use scrub or alcohol to remove the dirt.

Reinsert or Store Teeth

- Rinse your mouth with warm water.
- If possible, reinsert the permanent Tooth into the correct socket and use a gauze pad to hold the teeth in place.
- If you can't reinsert your permanent teeth, store them in whole milk to prevent drying.

Treat Symptoms

- Control bleeding with sterile gauze or cloths
- For pain and swelling, apply a cool or ice compress. Or use over-the-counter pain medication

Conclusion

For knocked or chipped teeth, you should contact **Emergency Dentist Near Me** for proper **chipped tooth filling** and diagnosis of the issue. Also, you should take the teeth or fragments so that a dentist can insert them into a socket.
