

# DENTAL ABSCESS: WHAT SHOULD YOU KNOW?

A tooth abscess is a pocket of discharge that occurs by a bacterial disease. The sore can happen at various regions of the tooth due to various reasons. A periapical sore happens at the tip of the root, while a periodontal boil develops in the gums along the edge of a tooth root.

## **What are the main causes?**

There are many causes of dental abscesses and you will not always know you have one, because while acute abscesses develop quite quickly and are painful, chronic abscesses may not be painful at all. An acute [dental abscess](#) is painful because it causes swelling, and there is no room inside or around the tooth to accommodate that swelling. When there is an infection in the body, it is normal to experience a degree of swelling as a result of fluid build-up in the area. When that fluid is unable to escape, the result is pain. The explanation ongoing **tooth abscess** may not be sore is that this liquid has figured out how to build up a departure course.

## **How is it treated?**

A **dentist near me** makes it drain, relieving pressure in the area, thus you do not feel any pain, or, if you are experiencing pain, it is likely to be minor. Your **Dentist in Houston TX** treats an **Abscess Tooth** in a number of different ways, depending on where it is located, and what it has affected. The treatment's aim is to kill or eliminate the origin of the infection and drain the abscess. This may involve root canal treatment, periodontal reparation, or even removal of the tooth and the prescription of an antibiotic to remove any infection.

### **How to prevent it?**

While periodontal disease is curable, again prevention is always better. So it is back to the basics of brushing and flossing correctly, as that keeps the formation of tartar to a minimum. However, be conscious that no matter how careful you are, you are unlikely to get relief from all of the plaque and tartar as there are some spots where your toothbrush and dental floss just can not reach. It includes twice-yearly visits to the dental specialist and oral hygienist of central significance since they have the devices and mastery to ensure that every one of the surfaces on your teeth is spotless.

### **When to visit a doctor:**

If the patient experiences fever and swelling in your face, immediately call the [Best Dental Clinic Near Me](#). if it has reached its severe stage, you may have trouble breathing or swallowing. Symptoms discussed below may tell you how the much deeper infection has been spread into your jaw. Consult an emergency dentist if you notice the following symptoms:
