

# What Do You Need to Know About CEREC Dental Crowns?

If one of your teeth is damaged or knocked, your Dentist may recommend a dental cap to address the situation.

A dental crown is a small, tooth-shaped round cap that completely fits over your teeth, and it can hide discolored or stained teeth or even on a tooth implant.

A crown helps protect a broken and damaged tooth, and a dental crown can also hold a bridge. You have various options when choosing dental crowns.

- Metal
- Resin
- Ceramic
- Porcelain

A combination of porcelain and metal crown called porcelain-fused-to-metal. Moreover, CEREC crowns are one of the most used, often made of ceramic and designed and created by computer-assisted technology.

Moreover, “CEREC” is referred for chair side Economical Restoration of Esthetic Ceramics. You generally get one of these crowns as part of the same-day procedure.

### **What are the advantages of CEREC same-day crowns?**

Rather than waiting for two weeks, you can get dental treatment done by walking in and out on the same day. **The [Dentist Near Me](#)** will use computer-aided design and manufacturing to get digital images for the tooth and jaw fabrication; they can also install it in the office.

### **The appearance of the crown**

You might hardly see your crown or any difference between your teeth and the crown. Moreover, the lack of metal in the metal core can help to look more natural and better like your teeth. According to reliable research, the aesthetic appearance of your teeth doesn't have a dark core of the reflection of light.

### **Strength**

According to reliable research, you can get reliable teeth restoration with CEREC system installation. Moreover, **[Dental Crown Near Me](#)** are sturdy and resist abrasion, lasting forever.

That's good news for people looking for dental crowns because **[Walk In Dentist near me](#)** can repair them at their office.

### **What are CEREC veneers?**

In some cases, dental veneers are a much better solution than the crown. Unlike crowns, dental veneers are very thin shells made to cover the front of eight teeth. Suppose your teeth are broken or damaged. They are often made of porcelain or a resin composite white.

**Walk In Dentist** also uses the CAD tool that is a part of the CEREC process to fabricate ceramic veneers for your teeth.

You should also get and expect long-lasting results. According to reliable sources, a high restoration may last for 9 to ten years.

### **How much does a CEREC dental appliance costs you?**

Most dental procedure costs may vary and depend on various factors, such as

- What type of dental insurance do you have?
- What kinds of procedures are covered under dental insurance?
- How much does your Dentist have experience?
- Region or location of treatment

Some dental insurance plans may cover your treatment cost, while others may be only some part of the treatment. The cost of the treatment may also be covered if the dental crown is necessary or just for cosmetic purposes.

### **Conclusion**

Suppose you have knocked teeth, big holes, stained or discolored. In that case, you should consider contacting a dentist for a thorough **Dental Crown Procedure** and diagnosis.
