

What Are The Signs Of Wisdom Teeth Infection?

Wisdom teeth are the last teeth set to grow in your mouth. They sometimes need an extraction, and sometimes it does not cause any problems for many people. When they start to erupt, they can be painful or cause no pain. But if an [impacted wisdom tooth infection](#) causes pain, you must visit the dentist. It may cause pain when insufficient space for them to grow or partially or entirely grow at an angle.

The wisdom can be infected as they grow at the back of the teeth, and cleaning them is hard. The dentist recommends removing them as they can cause pain and other oral issues. The food can be trapped in them, making it hard to brush and floss. This may lead to signs of wisdom tooth infection.

Signs of wisdom tooth infection:

- **Fever**

Fever is one of the symptoms you may experience when you have an infection in your wisdom teeth. You may have a fever as your body fights the infection. Talk to your dentist if you have a fever due to tooth pain and ask for **Toothache Cure**.

- **Sore Gums**

You may experience swelling in your gums when the wisdom teeth emerge, but this is a normal part of growing wisdom teeth if the soreness is high, mainly because of infection in the wisdom teeth.

Signs of wisdom tooth infection will be a throbbing pain in the area of your wisdom tooth, and your gum tissue will be red and swollen. They may bleed, also, and it won't be easy to brush and floss your teeth in that area.

- **Jaw Pain**

When you experience soreness, you may feel pain in your jaw and muscle spasms, making your mouth challenging to open. Contact your dentist to book an appointment as soon as possible for **Wisdom Teeth Removal**.

- **Swelling in Gums.**

Swelling begins in the tissue surrounding the infected wisdom tooth. As the infection progresses, you'll start to have swelling in the jaw, throughout the face, and even in your lymph nodes. Along with the swelling, you may experience tenderness in these areas.

- **Bad Smell or Taste in the mouth.**

Another reason you might not have much appetite is that you may have a foul taste and odor in your mouth. This is caused by pus seeping out of the infected tissue and into the rest of your mouth. Try rinsing with warm salt water to alleviate this symptom temporarily.

- **Painful, bleeding gums.**

Infections in the teeth can spread to the gums that surround them. A pus-filled abscess may be painful to the touch and swollen or red gums. Once this happens, it can cause other teeth damage, which is why dentists suggest **Wisdom Tooth Extraction**.

Similarly, suppose a patient discovers that their gums bleed when touched or after eating or brushing. In that case, it may indicate their gums are diseased, and blood shouldn't be in the mouth after brushing or eating if the gums are healthy and pink.

Conclusion:

Wisdom teeth removal is often removed, so they do not cause further pain or infection in your mouth. If required, talk to an **[Emergency Dentist](#)** to remove your wisdom teeth so you don't have to deal with pain or discomfort from an infection.
