

How Does A Dentist Identify And Treat A Dead Tooth?

Your teeth are made of a combination of both soft and hard tissue. You might not think of teeth as living; however, healthy teeth are alive. When the nerve of your teeth, which is in the inner layer and becomes damaged, such as through tooth injury or decay, it can also stop providing blood. That can cause an infection and lead to nerve death. This is also sometimes called a non-vital tooth. You should know how to identify a dead tooth and what to do if you see symptoms of tooth injury. Suppose you are experiencing any pain and discomfort. In that case, consider contacting [24 Hour Emergency Dentist](#) for a thorough diagnosis and treatment.

What are the signs and symptoms of a dead tooth?

A dead tooth has no more extended contact with fresh blood supply. For many people, discoloration of teeth may be one of the signs of death teeth. You may also find pain in the tooth or gums.

Healthy teeth have a dark shade of white, though the color may vary depending on your diet and hygiene. For instance, if you regularly consume stained food, like coffee, red, and blueberries. You may have discolored teeth or light yellow, and this discoloration will be uniform.

If you have stained or discolored teeth because the inner part of your teeth has died, it will be a great color than the rest of your teeth. The discoloration will increase over time as the tooth continue to decay and the inner nerves die.

Pain is another symptom of that dead nerve. Moreover, some people don't feel any pain. But they may suffer from an infection. The other signs of dental disease include

- Bad odor
- Bad taste in your mouth

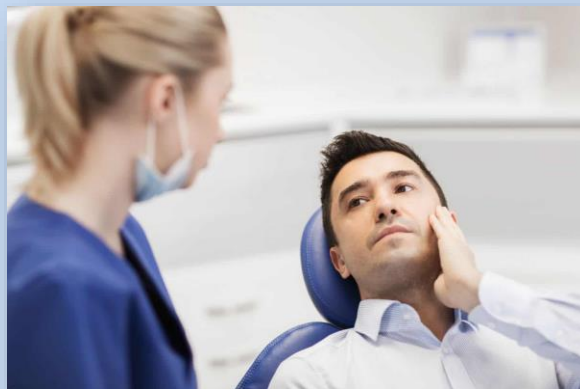

- Swelling around the gum line

Suppose you experience any signs and symptoms of dead teeth. It would be best if you considered contacting **Emergency Dentist Near Me** to know what is best for you.

What causes a tooth to die?

Any injury to your teeth is one of the most common causes of dead teeth. For instance, if you get hit in the mouth with a soccer ball or something with high impact something that can cause injury to your teeth.

You are more susceptible to cavities if you have unclean teeth or gums. If left treated, your teeth slowly destroy. Decay or cavities to your teeth mainly happen to the most challenging part of your teeth, called tooth enamel.

Suppose the innermost layer of your teeth is infected. In that case, it cuts off the blood and eventually causes the death of the tissue. You'll likely experience extreme pain once your decay reaches the pulp.
