

# CAN INVISALIGN BRACES FIX AN OVERBITE?

Invisalign braces are an improved orthodontic practice that offers an option to traditional metal braces. Made of medical-grade plastics they are a removal system that can help in [how to fix an overbite](#).

Invisalign is an accepted way among the **orthodontist in Miami shores**. Since its primary launch, huge improvements have been done in the way and the teeth alignments that it can treat. Originally, only the basic orthodontic corrections like **overbite braces** could be expected with Invisalign, however with the addition of accessories; tooth coloured material that is set upon the teeth to improve the aligner's grip, as well as other various other things can help you at so many ways and with the improvement, you can get so many benefits without **getting braces**.

Another limitation of the system was there were not enough people who were aware of the proper installation of Invisalign. This is another part that is now beginning to be dismissed as some **orthodontist Miami shores** complete numerous Invisalign cases a year and have really good experience to do work. You can rely on them for correction of **overbite after braces** or Invisalign.

Overbites were one of the difficult orthodontic difficulties that were not supposed to be treated by the Invisalign treatment. In fact, many less qualified **braces dentists near me** are still reluctant to treat cases for overbites with Invisalign. Nevertheless, amongst the most qualified Invisalign doctors, there is a growing band of great providers that can help you with the overbite problem. You can check their previous cases of [overbite before and after](#) to ascertain they are doing great or not.

For patients trying treatment through the Invisalign for overbites, there are so many factors that should be viewed. Mainly, when opting for the selection of a doctor, care should be taken that the provider has the expertise in treating the dental ailment and has successfully done it before. For this purpose, it may be more suitable to pick an orthodontist who will be a professional in an orthodontist, rather than a common dentist who is not exposed to the details of the tooth movement and other things.

### **Why should you correct overbite?**

1. To improve their bite - In so characters, the upper jaw and lower jaw are of varied size resulting in an overbite where the top teeth come forward, or an underbite is the opposite of this situation.

2. To align their teeth - straight teeth look beautiful and healthy. Besides having an incorrect bite, crooked or full teeth can conflict with eating. Teeth that are twisted or misaligned may make it hard for one to eat and breakdown their food, which can eventually begin to digestive issues since the food isn't chewed correctly in the mouth

3. To improve their smile - it has been proven by research that a nice smile points to higher self-esteem. Some people may not encounter any of the issues above but may simply feel self-conscious about how they look while smiling and to improve it treatment is required.
