

# What Are The Latest Technologies Available At The Best Orthodontist?

Many of us need braces or other orthodontic treatments to get beautiful smiles, nicely aligned teeth. In the past, consulting the [specialist orthodontist](#) was an easy task; the general dentist who advised realignment would simply ask you to meet the **orthodontist specialist near me**. Today's complex, advanced orthodontic alternatives widen your range of potential providers, and deciding the **best-rated orthodontist near me** gets even more difficult. While getting into the details might get overwhelming, finding a **Miami orthodontist specialist** is still simple. Here are a few technologies that you should seek in the orthodontist to ascertain if he is actually good.

## VELscope

This is one of the most interesting and frequently used techniques to deal with infection and dental problems. Under this procedure, a special type of light is practiced that the dentist flashes in the mouth to check any problems instantly.

## Why so special in this?

VeLscope is an exceptional form of technology that is also used to check the early forms of cancer and diseases that can show traces of oral cancer. Find out what special in them at the **orthodontist appointment**. You can find this facility even at the **affordable orthodontist near me**.

## Digital X-Rays

Only available with some of the quality **orthodontic care specialists** who are proficient in their practice use this, digital X-rays have given the major reforms in the dental world. They are faster and the effect of radiation is very less which was previously a concern.

What is the procedure behind:

A patient has a digital X-ray done. The wanted image arrives on the screen within no time. Dentists then magnify to understand what's going on in the treatment. Digital X-rays are much less harmful to patients; it is a 90% better option than the old one.

Invisalign

These are nothing but invisible braces! Yes, that's exactly what it is. Here's a technology that even the best dental specialist could be having! Although popular it's the good quality in these braces that's hard to get. They are almost invisible and smoothly straighten your teeth in the period of one year rest depending upon the case. They are an effective and comfortable way to make your smile aligned, without wearing heavy, metal braces. These aren't really easy to clean and affordable so people don't buy them. But they definitely are a lot easier than metal braces.

Here's a procedure that is painless and easily removes any form of bacteria while the procedure is still on, to circumvent any difficulties later. This is probably one of the most interesting ways to deal with dental problems that help you stop tooth troubles painlessly.

Laser technology is another treatment followed for improved efficiency. This also stops the discomfort when you talk about different dental procedures. These procedures involve filling cavities, decreasing tooth sensitivity, and whitening. You can find this at any [top rated orthodontist near me](#).
