

DENTAL IMPLANT: WHAT ARE THE VARIOUS ADVANTAGES?

A dental implant is a cylinder-shaped screw that is surgically placed into our jawbones by the Specialist dentist from the **Dentist's Office Near Me**. This Screw functions as the base of your natural tooth. Surgery usually implants requires 3 to 6 months' time to fuse with our bones. This process is called osseointegration. You can know more about it in detail from **DDS near me**.

Dental Implants has various major advantages, given below:

Natural Look and Feel:

When a Dental implant is done it offers an appearance similar to the existing natural teeth. It provides both aesthetic and functional benefits. Thus, with dental implants patients experience as they used to do with natural teeth and get an attractive and flawless smile. You can get this procedure done from an **affordable dental**.

Longevity:

Dental Implant is a long-lasting treatment that works properly for about 30 years. The only condition to maintain the results for longer is to practice oral hygiene properly like you have to brush it twice a day, as well as have to visit the **Best Dentist** every six months for preventive care.

High Success Rate:

People think why they trust [dental implants near me](#) because no one wants to go through any type of medical procedure if it does not produce effective results. And the good news is that Dental Implant has a 95% success rate if it is done by a specialist dentist with proper planning & advanced dental technology.

Improves Outlook on Life:

If people have missing teeth that result in losing the ability to eat their favorite food properly. A dental implant restores your chewing ability equal to 95% of natural teeth ability whereas a denture enhances the chewing ability only up to twenty-five percent. So Dental implants not only restore your chewing ability but enables you to eat the food you love. People who obtain dental implants have been living more productive lives as their dental concerns have been reduced after the procedure.

**Prevents Dental Problems:**

However, they provide the exact appearance similar to natural teeth, dental implants are manufactured with inorganic material. Therefore, they are inaccessible to cavities, disease, and decay. People with dental implants enjoy better dental health throughout their lives than others who don't have them.

Minimal Maintenance:

Implants are much easier to maintain than any other type of tooth replacement option like dentures and bridges. Since dental implants are created with strong special material, results are extensively durable and long-lasting. Patients should take care of them by brushing and flossing to increase their lifecycle.

What is the Cost of Dental Implants?

As dental implants are made of three components i.e implant, abutment, and crown. Therefore the average cost of a single traditional implant is given below:

The price of a dental implant- \$1,000 to \$3,000, cost of abutment and crown may range between \$500 to \$3,000. Hence, the total cost may be \$4,000 per implant.

If you have gone through an accident or trauma due to which you have lost your tooth/teeth, visit a dentist immediately to get the proper treatment and results.
