

# Why Are Tooth-Colored Fillings Right For You?

**Tooth-Colored Fillings** or Composite fillings are created to restore the natural appearance of the tooth. It is more realistic than other types of dental fillings. Composite fillings are called tooth-colored fillings because they blend well with the color of your teeth and are less visible. The amalgam filling appears darker and more easily visible to others. Once the tooth is chipped or damaged, there is no way to fix it back, so dentists fix this dental imperfection with the help of dental fillings.

The Composite fillings are made of ceramic and plastic mixtures that chemically adhere to the teeth. The Filling is mainly used to fill the area with decay and help restore chipped or damaged teeth.

Usually, dentists prefer using composite fillings in the front teeth as they are more likely to be noticed. The tooth-colored fillings give that natural blend to your teeth. With advancements in dental technology, tooth-colored fillings can now be used on molars, which acquire more tears and wear than other teeth.

## **What are the advantages of choosing a composite dental filling?**

**Composite Dental Fillings** are the most common and used filling in dentistry because they give the blend the same as your natural teeth. Not only giving you the natural teeth color but there are also many other benefits that Composite Dental Fillings can help you with. Here are some benefits of choosing tooth-colored fillings and protecting your dental health.

### **Appearance**

Composite **Dental Fillings Houston** can give you that natural teeth appearance than other fillings, which is why it is the most used dental Filling by a dentist. Dentists use it in the front teeth primarily because they are the ones that show up when you smile or talk. Appearance plays a vital role in enhancing your

confidence and self-esteem. Talk to your **Best Dentist in Houston, Tx**, and choose the Filling that fits your aesthetic look.

### **Less removal of tooth structure**

Tooth-colored or composite fillings require less removal of the tooth structure to bond it with the teeth. Therefore, silver fillings require more teeth structure removal to bond with the teeth. Therefore, tooth-colored fillings only require removing the decayed or damaged area in the tooth. Silver fillings need to remove the healthy portion of the teeth to bond the teeth properly with the Filling.

### **More Confidence**

One of the best reasons to choose tooth-colored fillings is you can smile boldly and with all confidence. Protecting your mouth from cavities and other oral issues before they occur.

### **Safer for Your Teeth**

It is the safer way to protect your teeth from causing damage and oral issues in your adjacent teeth. The Filling is made of porcelain, so it will not develop or contract, and it is safely put in your teeth, saving them from further damage.

### **Custom Shade to Match Your Teeth**

The Filling is the best as it uses a color that blends the shade of your teeth. The color is custom-made of the Filling to match your tooth color, which is why it is not easily visible. It blends so well that you will recognize the treatment has been done.

### **In Conclusion:**

The best part of tooth filling is it has s many benefits that suit every person with tooth decay or damaged teeth. It has long-lasting benefits that make it more useful and stronger.

If you are considering composite Filling, call your **Affordable Cosmetic Dentistry** and book an appointment to treat your decayed or damaged teeth. Dont leave a decayed tooth without treatment, or it may cause other dental issues.
