

# WISDOM TEETH CAN GIVE THESE PROBLEMS TOO!

The wisdom tooth is a common factor for all. It usually starts to show its severely painful side around the 25+ age. But in many cases, it does not cause any issue and stay dormant for years or the entire life. The **Emergency Tooth Extraction** is required once they try to come out in abnormal manners. Apart from that, there might be some other issues that may be related to the same can show some related problems.

## The main concerns with wisdom teeth

The usual reason behind the difficulty is the growth that is triggered by Mother Nature. It has proceeded to change the humans living on this planet. The human being is also not any exception to this. Previously, an extra set of molars was present in the mouth to provide help to chew the raw food instantly. In course of time, the food habit of human beings is changed and it is not needed anymore. So, the extra set of molars had lost its place in the gum and the mouth. In this way, they started to show their rebellion against the system and start popping again with lots of pain and difficulty. Leading to visit the [Emergency Dental Clinic](#) and removing it for once and all.

How the wisdom teeth create issues in oral problems and why seek Emergency Tooth Extraction?

These types of teeth cause issues in several manners like-

- A wisdom tooth coming in the slant direction

Usually, teeth come out of the gum vertically, but in this case, this one tries to emerge in an inclined manner. So, it goes out of its space and creates problems. Leaving no other alternative but taking help of the [emergency dental clinic near me](#)

- Putting pressure on the root of the adjacent one

As a side effect of its impaired growth, it may start creating pressure on the roots of the adjacent ones making some loosening forces on the existing ones. As a result, the adjacent tooth gets wrecked and creates further problems.

- Impacted development

Sometimes, these molars start to grow within the layers of the gums but keep on creating continuous pressure on the layers of the gum and the body of the other teeth even before emerging on the surface. It is better not to dial the **emergency dental services near me** and you take additional care.

- Injuring the gum terribly

These molars tend to come out of the final portion of the gum. As the gum stays unused for a long time after birth, it becomes tough naturally. When these molars try to come out of this part, it has to put some extra pressure on the gum to emerge. It creates tremendous pain to tear the extra tough part of the gum.

- Infection in the wounds

Usually, the respective parts of the gum become wounded while dealing with the emergence of the problematic molar. Sometimes, this wound becomes infected with the food particles or if the patient has smoking habits. The menace of the infection creates a double bonanza in the already existed pain of the third set of molars. If you are dealing with this then you need **ASAP Emergency Dental Services**.

Under such circumstances, wisdom teeth extraction becomes unavoidable and urgently necessary. Therefore, often this type of dental problem is considered a dental emergency that needs immediate action.
