

The Benefits Of Dental Implants

Do you have a decayed or damaged tooth? In the case of missing teeth, the dentist advice to opt for dental implants. When it comes to replacing teeth that are missing or damaged, you have several options. However, the best option is opting for dental implants. The [dental implants Houston Tx](#) are designed to look, feel, and function like your natural teeth to be confident in your smile. The dental implants have several benefits. If your planning to opt for dental implants, then this post is meant for you. Here is a list of the best interests of dental implants.

The top 5 benefits of dental implants

1. Natural look

Dental implants are designed to look, feel, and function like your natural teeth. The dental implants provide full support to the back and front of the mouth. The dental implants boost confidence and help in improving the smile. Unlike dentures, they do not fall out; hence are more reliable.

2. Long-lasting and reliable

With proper care and maintenance, implants last as long as conventional restorations on teeth, with predictable outcomes. **Dental Implant Dentist** state that the average lifespan of the implants is 5-10 years. With a regular visit to the dentist and opting for proper dental hygiene, the implants tend to last longer.

3. High success rate

The dental implants have higher popularity. They, due to their affordability, are most sought after. Well planned and cared for dental implants generally offer 'survival rates' comparable

or better than other teeth replacement options. With improved technology and techniques, [Cosmetic Dental Implants](#) surgery has witnessed a higher success rate.

4. Improved functionality

Due to the missing tooth, the people face problems in chewing food. The dental implants placement helps in increasing the functionality of the teeth. Dental implants are anchored in your jaw bone, just like natural teeth. The implants help in preserving the jawbone and also significantly reduce bone resorption. Replacing missing teeth with implants allow you to chew your food better and speak more clearly.

5. Affordable

The average cost of a single arch of implant-supported teeth ranges between \$15000- and \$30,000. The cost of the full arch dental implants ranges between \$30,000- \$50,000. The single dental implant costs around \$3000 or more. The price of the dental implants is reasonable and is known for its longevity and the oral benefits associated with it. The dental implants are also cheaper than the removable denture option. The full arch dental implants are also sturdy and stain resistant.

6. Improved aesthetics

Dental implants preserve natural tooth tissue by avoiding the need to cut down adjacent teeth for conventional bridgework. They also will preserve bone and significantly reduce bone resorption and deterioration that results in loss of jawbone height. As per **Dental Implant Dentist Near Me**, the implants help in restoring the jawbone structure. The implants also preserve the natural tooth tissue of the teeth and also reduce bone reabsorption.
