

# Why is dental bonding a better option for you?

[Dental Bonding Near Me](#) might offer self-assurance to stainless and pearly whites teeth in cosmetic dentistry if you have a chipped, fractured, broken, or discolored tooth.

Your dentist applies a tooth-colored composite resin to one or more of your teeth during the tooth bonding treatment to repair the damaged teeth. Because it is significantly less expensive than other dental procedures like crowns and veneers; moreover, it is a cost-effective choice.

## How does tooth bonding work?

Your dentist begins the procedure by finding a composite resin shade that blends the shade of your natural teeth using a color shade guide. A dentist minimally trims your tooth surface, then applies an adhered liquid to make the bonding with the tooth.

After molding or shaping the tooth with the composite resin material, your dentist hardens the substance with the help of ultraviolet light. After the resin has dried, the [Best Cosmetic Dentist Houston](#) might finish the tooth shape if necessary.

## Why get teeth bonding?

A tooth's problem or aesthetically bad tooth can be fixed using tooth bonding treatment. Tooth Bonding is sometimes used to repair and reshape a tooth that is decaying, broken, or discolored. Additionally, this treatment will help you fill up tiny spaces between teeth. A tooth's size can also be increased through tooth bonding. For instance, you could desire all of your teeth to be the same length because one of them is shorter than the others.

Tooth bonding typically takes 30 to 60 minutes per tooth. Moreover, it may depend on how extensive the process and the number of appointments may take longer.

### Are there any risks of teeth bonding?

- Dental bonding carries no significant dangers.
- It's essential to remember that the composite resin treatment isn't as durable as your original teeth.
- The filling could crack or come away from your natural tooth. However, chipping or cracking doesn't frequently happen with a crown, veneer, or filling.
- If you bite your fingernails, chew on pens or pencils, eat ice, or bite down on hard food or candy, your bonded tooth may chip.
- The stain resistance is also lower than other dental materials. You can see discoloration if you smoke or consume a lot of coffee.

### How much does teeth bonding cost?

The [Dental Bonding Cost](#) varies depending on the location and the procedure's scope. Before making an appointment, you should check with your dental insurance company. Certain insurance companies do not cover dental bonding because they view it as a cosmetic operation.

### How do you get ready for dental bonding?

It is not necessary to prepare specifically for tooth bonding. However, you should talk with **Restorative Dentistry Near Me** to find out if you're a candidate for this operation.

Dental bonding may not be an option if you have extensive tooth damage or decay. Instead, you could require a veneer or crown.

### Conclusion

If you have chipped, knocked, or discolored teeth, you should consider visiting a dentist for [Affordable dental](#) treatment. They will help you to look better and have an aesthetic smile that makes you less worried and comfortable.
