As skilled dentists imparting fine care in [dental implants near me](#), the crew at Houston Family Dental is here to guide you through the dental implant process from beginning to end.

## What are Dental Implant Procedure

The [Dental Implant Procedure](#) entails numerous steps, every essential to engaging in a a hit final results. If you're thinking **what are dental implants**, right right here is the answer: A dental implant is a prosthetic teeth alternative that is surgically positioned into the jawbone. This way is turning into increasingly famous because it offers a eternal technique to missing teeth, no longer like dentures or bridges, which may additionally need to be replaced over the years.

- **Initial session and assessment:** The preliminary consultation with your dentist or oral healthcare professional is the heart of the dental implant adventure. During this visit, the dentist will verify your oral health, take **3D Imaging** x-rays, and discuss your medical history. This assessment enables the dental group to determine your suitability for dental implants and broaden a personalized treatment plan.

- **Treatment planning:** The dental team will create a remedy plan tailor-made for your wishes following the evaluation. This plan outlines the variety of implants required, the position strategy, and the form of recovery (crown, bridge, or denture) attached to the implants. The treatment plan guarantees that each one factors of the procedure are carefully taken into consideration.
- **Tooth extraction:** If a broken or decayed teeth is still gift, it is able to want to be extracted before the implant may be located. This step ensures a clean and wholesome base for the implant. This method is not necessary if the enamel has already fallen out.

- **Implant placement** is a surgical procedure wherein the dentist or oral health practitioner locations a titanium implant into the jaw bone. Over time, the bone fuses with the implant thru osseointegration, growing a sturdy and strong base for the replacement enamel.
- **Healing length:** After implant placement, a recovery duration of numerous weeks to a few months is essential. During this time, the implant and the jaw bone combine, making sure the implant's balance. A transient restore may additionally on occasion be carried out to maintain look and capability.

- **Abutment placement:** An abutment is located as soon as the implant is fully integrated. The very last restoration and the implant are related thru the abutment. This minor surgery involves exposing the implant and placing the abutment.
- **Impressions:** After placing the abutments, impressions of your teeth are taken. These impressions are used to create custom-made crowns, bridges, or dentures that will fit your implants perfectly and blend seamlessly with your natural teeth.
- **Final restoration:** The final step involves the final restoration, whether it is a crown, bridge, or denture. This restoration is designed to match the color, shape, and size of your natural teeth, providing a vibrant look. Once attached, your smile is fully restored, and you can enjoy the benefits of your new teeth.
