

# *What Are The Important Veneer Facts?*

The job of veneers is to make the teeth straighter and appear whiter. Veneers are permanently bonded to your teeth and the preparation process is quite lengthy, besides the application. Cosmetic dentists use veneers as the treatment option to cover broken or discolored teeth to ensure they appear white and glossy. [veneer teeth](#) customized by the treatment you may require veneers are set in a multistep procedure. To make the space for your veneers they will grind down the front teeth's surface to ensure they fit perfectly in your mouth. **snap on veneers** may require several hours in the initial appointment depending upon how many teeth need to be treated.

## What exactly are lumineer veneers?

Lumineers are a kind of veneer used in cosmetic dentistry. They are made from carinate feldspathic pressable porcelain and are often referred to as no-prop veneers. Lumineers are cheaper than traditional veneers. They can be removed or replaced easily and take less time to apply. For **lumineers teeth**, the dentist may take a mold of your teeth and send it to the lab who will make them.

Lumineers are slightly translucent in color and comparatively thinner than regular veneers. They appear almost identical to the natural teeth enamel. They provide effective whitening

benefits and give a healthy and bright smile to many people, but they may not be able to whiten and brighten severely stained or discolored teeth.

## How much is the cost of pop on veneers?

Who doesn't want a beautiful and perfect smile? A beautiful smile sure is priceless but that doesn't mean it's free of cost. Many people are leaning towards snap-on veneers or temporary dental veneers. To achieve a **Snap-On Smile** you need to spend somewhere \$25 to \$1,000 in between depending on where you buy them. The dental [veneers cost](#) may differ according to the specific need of treatment and the location.

## What are the major risks related to dental veneers?

My **Emergency Dentist** warns me about the certain risks of having dental veneers. Below are some of the major risk factors associated with dental veneers.

- Veneers are costly and unaffordable for many people
- Once the process is done you can not undo it
- Veneers can not be repaired if they broke or chip
- The color of the veneer can not be altered once it is placed.
- The color of veneers might not match the exact color of your teeth
- Your teeth can still decay even after putting on veneers
- Veneers can dislodge or fall off Though it's rare.
- Veneers are not an ideal choice for those who have unhealthy or weakened teeth.

- People who grind or clench their teeth are not the ideal candidates for dental veneers.
- Your teeth might turn sensitive to hot and cold food and drinks due to enamel removal.
