

# Wisdom Teeth Removal for better health.

Wisdom tooth extraction is an important decision; whether it is a wisdom tooth or an impacted tooth extraction, it will affect your dental health and lifestyle. The wisdom tooth is the third molar and can cause severe pain if not removed. The removal of the wisdom tooth may be crucial, depending on your case. Sometimes the teeth do not erupt fully or grow towards the adjacent tooth. The [Dentist In Houston](#) can call for wisdom tooth surgery.

Wisdom teeth are the final to grow in your mouth. Sometimes they do not grow naturally and erupt uneasily, which causes a lot of pain and discomfort. And when you do not remove the infected teeth, it can spread the infection to the other nearby teeth, and you may have many oral issues like decay, cavities and severe conditions. For many people, wisdom teeth do not cause any problems.

The surgery sometimes becomes necessary because when the wisdom tooth doesn't have enough room to grow, which leads to the extreme pain, infection, or other dental problems. In this situation, the need to pull out the wisdom tooth. A dentist or an oral surgeon may do the extraction.

## **What is the primary purpose of wisdom tooth removal surgery?**

Wisdom tooth extraction is essential, but sometimes a [tooth extraction](#) is unnecessary; the dentist must see for that if it requires to extract a tooth. Visit a specialist dentist who can tell you whether you need an extraction.

When you visit the dentist for tooth extraction, the dentist will first take the exam and X-rays to look your wisdom teeth are impacted or if any other dental issues are causing pain. Not everyone has wisdom teeth, but most individuals have one to four. If you do not visit your dentist and leave it untreated, some potential

issues with wisdom teeth can cause infection, Tooth decay, damage to surrounding teeth, gum disease, bone loss, and tooth loss. You may have these problems if you do not treat your infected tooth.

Your [wisdom teeth removal](#) dentist will first monitor your wisdom tooth development and check with X-rays. This will exactly tell the dentist whether you need a tooth extraction. And if yes, the dentist will recommend you extract the teeth. If the dentist finds symptoms of an impacted tooth, the dentist will ask for an extraction to stop the infection. It is good that you extract the teeth because the wisdom teeth area is not easy to clean. You must remove the teeth to keep your oral health excellent and healthy. Your [wisdom teeth extraction](#) dentist may refer you to an oral surgeon for tooth extraction.

#### **In Conclusion:**

Schedule an appointment with the dentist and consult the dentist for the extraction.

The surgeon will look for your dental records and take additional X-rays to confirm the scope of your surgical needs.

Call and visit the **Tooth Extraction Near Me** if you're experiencing a dental emergency, such as severe pain, fever, or loss of teeth. Take your time with the visit to the dentist.
