Which POS Printer Should You Buy And Why?

About POS Printers

A thermal [pos printer](#) is considered the best option for grocery stores and retail shops that sell loose products. Thermal printing is more advantageous than dot matrix and inkjet printing but you should know more about the printing technologies before making an opinion on a printer.

Dot Matrix Printers

A dot matrix [point of sale printer](#) is an economical option as it gives more prints at a minimum operating cost. Tiny pins mounted on the print head of the machine create a series of dots by working with an ink ribbon. These dots produce letters and graphics on the paper.

- The upfront cost is reduced considerably
- It can produce multiple copies in one-go
- It is good for working in a hot and humid environment
- Easier to work with and reliable

Thermal Printers

Thermal printers like [Posiflex Rugtek RP80USE thermal receipt printer](#) utilize heat for printing. The heat transfers ink on the paper and gives the highest quality print. Also, it is faster than others. Another advantage of thermal printing machines is their smaller size. You will find that most restaurants and grocery stores use thermal printing machines.

- Thermal printing machines make little sound
- The image quality is better and sharper than in others
- Thermal printers are relatively faster
- Thermal printing machines are durable

Inkjet Printers

Inkjet is another popular printing technology but it isn't considered suitable for small and medium business organizations. But it is good for producing color logos and graphics-oriented coupons. And you can [buy printer online](#) at a reduced price.

- Its upfront cost is lower than others
- Ideal printer for detailed and smooth printing
- Works faster while printing dense graphics and images
- Produces lesser sound than dot matrix machines
- Easier to use and maintain

Which Is The Better Connectivity Option For Printers?

Visiting [printers for sale](#) would give you plenty of options to choose from but there are some factors to consider so you can find the right printing machine. You need to connect a printer to your POS system for printing. Choose an option that better suits your needs.

- ❖ Ethernet is wired connectivity suitable for connecting multiple POS machines with a single printer
- ❖ Wi-Fi connectivity provides unlimited mobility to printers but you need a router for creating a Wi-Fi zone
- ❖ Bluetooth connectivity is suitable for mobile billing but you need to keep the printer close to your mobile
- ❖ USB connectivity provides fast connectivity with POS monitors

How To Measure Print Speed Of Printers?

The speed of a [pos printer](#) is measured in receipts per minute (RPMs) or millimeters per second (mm/s). A fast printer can print more receipts per second. Your objective should be to buy a machine with a high print speed. In addition to speed, you should also consider the dimension of printers to find the machine that fits decently on your POS counter.

- 200 mm/sec is considered a good print speed for thermal machines
- 2.1lps is the best speed for dot matrix machines
- Slower print speed would mean longer queues on POS counters
