

Point of sale systems

What Is a POS System and Why Does It Matter?

A point of sale (POS) system combines software and connected hardware to process sales and support everyday operations.

It links checkout with inventory and customer service, helping businesses keep daily activity connected as they grow.

The connected setup

Which Components Make Up a POS System?

Configure the hardware around your workflow, rather than a one-size-fits-all kit.

Connections and supported peripherals depend on the chosen terminal and POS software.

Which POS System Fits Different Business Environments?

All-in-One POS

Core components in one streamlined workstation.

Retail POS Terminals

A fixed checkout for everyday shop-floor sales.

Touch POS Systems

Touchscreen interaction for transaction entry.

Android POS Terminals

A platform for compatible business apps.

Portable POS / Mobile Terminals

Take transactions away from a fixed counter.

POS Kiosks

Customer-facing ordering or self-service checkout.

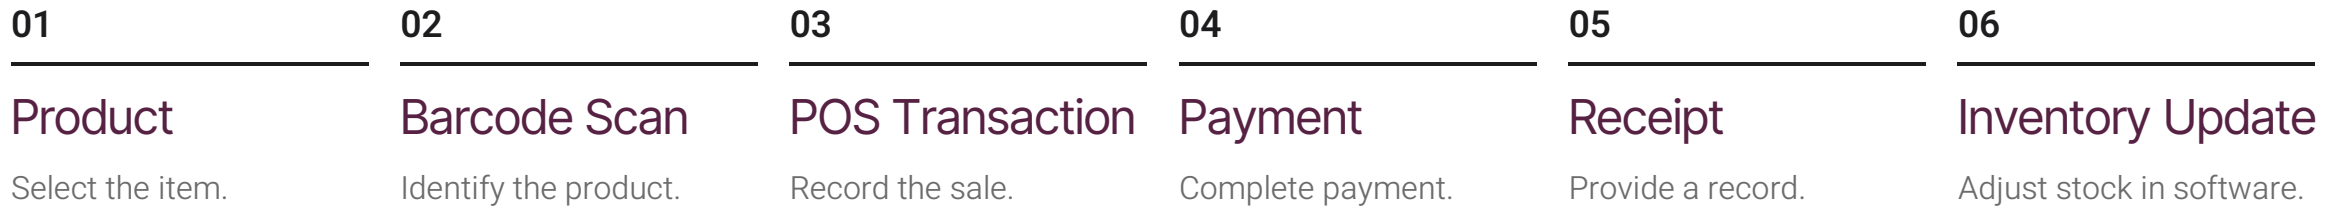

Tablet-Based POS

A compact setup with flexible placement.

From sale to stock record

How Can a POS System Improve Everyday Operations?

Connected hardware and compatible software can turn separate tasks into a coordinated checkout workflow.

Organised checkout

Less manual entry and smoother staff workflows.

Operational visibility

Sales information and stock records in reach.

Room to grow

Coordinate equipment as business needs expand.

Automatic updates depend on software features, integrations and configuration.

Start with the operating environment

How Do POS Requirements Change by Business Type?

Retail Store

Retail POS systems need checkout, scanning and inventory workflows.

Grocery / Convenience

Scanning, weighing and transaction processing need to work together.

Hospitality

Keep the transaction setup compact and easy to reach.

Specialty Retail

Access product information and choose suitable peripherals.

Multi-Location Business

Check support for centralised operational visibility.

Self-Service Environment

Make the customer-facing interface clear and accessible.

The right POS setup starts with the way the business operates.

What Should You Check Before Selecting a POS System?

Business size

Will the setup support today's operations and future growth?

Checkout environment

Does the hardware fit the counter space and workflow?

Connectivity

Check USB, Ethernet, Wi-Fi, Bluetooth and other required interfaces.

Software compatibility

Confirm support for the required POS software and apps.

Peripherals

Verify scanners, printers, cash drawers, displays and accessories.

Multi-location needs

Check centralised stock and operational management capabilities.

Staff usability

Try the everyday tasks employees will perform throughout a shift.
