

Surfboard bracket

To mount a surfboard on the wall, make a small bracket to hold the centre or double fins. Cut a slot or slots, 10 x 80mm, in an offcut of plywood and screw it to a plywood plate for fixing to the wall. Sizes will vary for different surfboard designs. To stop the top of the board from toppling forward, mount a small 100mm block on the wall, just down from the top of the board, and use Velcro dots to hold the board.
