

## Why Sclerotherapy Is Considered The Best Treatment?

Sclerotherapy is the most recommended treatment for the spider and varicose veins. It involves injecting a chemical called sclerosant, directly into the affected veins. If you are looking for a ‘**vein clinic near me**’ on Google, you might find a number of options to choose from. You may need to research a little to find the one which is both convenient and suitable for you. It might seem difficult but with the number of clinics offering modern and less-invasive treatment, a proper analysis might help you select ‘the one’ for you.

Generally, vein surgeons prefer Sclerotherapy because of its minimally invasive and effective nature. It is a ‘gold standard’ method preferred over any other method.

[Varicose vein Sclerotherapy](#) is a non-surgical procedure to remove varicose veins. The process involves injecting a chemical solution

directly into the veins. This causes a reaction which results in shrinking of the varicose veins. The chemical causes heat, inflammation of the damaged veins and necessitate the process until unhealthy veins fade away. Of all the procedures available to treat varicose veins, Sclerotherapy is the preferred method by the patients as well.

Look for '[Sclerotherapy near me](#)' and you could find that there are various specialists that offer the treatment. The solutions utilized in the procedure include hypertonic saline, Polidocanol, and Sodium tetradecyl sulphate.

Sclerotherapy procedure typically takes between 15 minutes to 1 hour, depending upon the severity of the issue. It is recommended that patients should avoid medications for at least 10 days prior to the treatment such as Tetracycline or Minocin. Your specialist will be able to provide more guidance on this. You must consult your doctor well before opting for a procedure. It is also recommended that patients should also avoid anti-inflammatory medications for at least 48 hours. The reason is that an Anti-inflammatory medication might interfere with the effective action of the sclerosing agent.

Patients often wonder about the side effects of Sclerotherapy treatment. The treatment is less invasive and doesn't cause many issues. There might be bruising, burning sensations and lumps in the affected area. Most of the side effects fade away during the healing process itself. Patients are advised to wear compression stockings and do some physical exercise to help the blood flow uninterrupted.

After the treatment, the patients might resume their work and are encouraged to walk for at least 30 minutes every single day. The treatment should result in the proper functioning of the legs. In order to maintain the results, it is important that you must observe several habits and consume healthy and nutritious food.

Avoid activities that cause straining and damage to the lower body vein system so that the valves can function well. The cost of the Sclerotherapy depends totally on the severity and your geographical location. Also, there are several insurance plans that cover the cost of the treatment. This way you can check for the clinics that offer such plans and get yourself treated at an affordable price.
