

Tips For Choosing A Vein Specialist

Choosing a varicose vein specialist is a difficult process for many patients.

Varicose veins are all those elongated or tortuous superficial veins of the legs that, in many cases, a condition not only an aesthetic problem but a health problem. It is an extremely frequent pathology in the general population. Varicose veins frequently cause symptoms of heaviness, cramps, itching, and nonspecific discomfort that can lead to pain and edema (swelling). A very special group of patients with venous insufficiency are pregnant women, in whom the development and progression of varicose veins and their symptoms are accelerated.

The varices are a benign pathology and, as such, after an accurate assessment by Doppler ultrasound by the [vein specialist near me](#), can be treated equally so benign.

We have several treatment possibilities, which must be combined by experts in the field to obtain the best results in the shortest time and with the least impact on the daily life of patients affected by this pathology.

As varicose vein treatments have evolved, new medical specialties have been developed to provide the latest techniques for patients.

There are three types of doctors who treat varicose veins and other vein problems:

- Vascular surgeon.
-
- Interventional radiologist.

They are all **vein doctor near me** in varicose veins with training in different areas that are related to each other.

Typically, anyone of the three is a varicose **vein specialist** capable of using minimally invasive procedures to treat varicose veins, such as endovenous laser treatment, sclerotherapy, and radiofrequency ablation. These are modern techniques that can be performed in the doctor's office rather than a hospital and require much less recovery time.

Vascular surgeon

The vascular surgeon uses [varicose vein removal](#) to treat the problem in your veins through surgery. However, his surgical knowledge and skill help him perform minimally invasive procedures with greater capacity.

The **vascular doctor near me** may also perform more invasive procedures that require general anesthesia and recovery in the hospital.

Interventional radiologist

An interventional radiologist is a doctor who practices another sub-specialty that helps varicose veins. These doctors invented angioplasty, and have developed similar techniques to treat varicose veins.

Phlebologist

A phlebologist is a varicose vein specialist who has obtained special training in vein diseases and treatments. Most phlebologists focus on leg veins and related diseases.

Which varicose vein specialist is superlative?

The phlebologist is a specialist in varicose veins who normally concentrates on their superficial problems. Most of the time, they are only trained to perform procedures such as sclerotherapy, which serves to eliminate only cosmetic problems of varicose veins. Still, they do not eliminate the root of the problem.

For their part, interventional radiologists are trained to diagnose the severity of a varicose vein problem. This serves to choose the most appropriate treatment for each of the cases. Some of the interventional radiologists can perform minimally invasive procedures to treat both root and surface problems.

The **doctor near me** who can offer you comprehensive treatment for varicose vein problems is the vascular surgeon, who is trained to perform most procedures and can be supported by a radiologist to evaluate each specific case.

Ideally, you should go to a specialist in a **vein clinic near me** that can offer you comprehensive treatment through various specialists.
