

Summary.

During the research, I will determine which tree branches the children recognize.

Research object.

Selected tree branches.

The aim.

I want to know which trees children recognize the most.

Research tasks.

1. Find as many different tree branches as possible.
2. Glue them on a sheet.
3. Make a survey.
4. To present the results of which trees are most often recognized.

Research methods.

During the test.

Means.

Tree branches, white sheet of paper, adhesive tape.

Investigation progress.

- 9 twigs are glued on the leaf;
- A table for answers is being prepared;
- Children are interviewed;
- Research results are presented.

Research findings.

According to the obtained results, the children recognized only 4 trees out of 9 presented. Fir and thuja trees were guessed the most. A few more children guessed the birch tree and the thorn tree. The children did not know what the branches of willow, plum, alder, apple and lime trees look like.
