

No time to waste photo report

In this small photo report we show how our terra in Emmen separates the waste

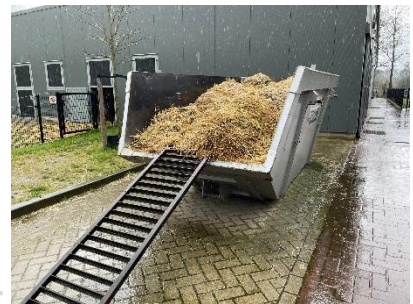

Our school has several trash cans, including these three that are specifically meant to separate, such as organic waste, Other waste and Plastic, but unfortunately most students don't stick to that and just throw it in without looking to see if they separate it properly.

Also, you have this trash can that is not really useful to separate with, everything is thrown in, including Plastic and food

At our animal room we have these where the food remains of the animals go in and are emptied at the end of the day, even when we have mucked out the cages and stables we throw it into our manure hump in this large container

Finally, we empty the trash cans and throw them in the container outside and do our best to separate as well as possible.
