

INVISALIGN TREATMENT: LEADING TEETH STRAIGHTNING TREATMENT

INVISALIGN TREATMENT

[Invisalign treatment](#) is a kind of orthodontic treatment given to dental patients helping in the straightening of teeth. It is an alternative to braces treatment with minimal restrictions. In this treatment, you are provided with a series of clear, comfortable, and removable aligners which helps to straighten your teeth without any brackets and wires. These aligners are made up of flexible thermoplastic material called SmartTrack with high molecular weight. These are FDA approved without containing any BPA, latex, BPS, gluten which proves that these materials are biocompatible and can be used for long terms inside the human body. These are very thin and clear which fits comfortably and neatly over your teeth. Your treatment may require small tooth-colored shapes called smart force attachments which gently pushes your aligners to move your teeth on its accurate position.

BENEFITS

The Invisalign is clear and almost invisible. You can remove them to brush and clean your teeth, drink and eat, or whenever needed without any hassle. It does not include any metal braces aching or irritating your mouth. This treatment can be taken by any age group either a teenager or an old aged.

This innovation and technological advancement fixes almost every from simplest to the complex teeth-straightening and bite issues that too without disturbing your busy schedule.

The Invisalign clear aligners are removable hence, there is no restriction for food or drinks, and you can eat whatever you want after removing the aligners.

These aligners gently and smoothly move your teeth to their right places hence; you may feel uncomfortable in the first few days of wearing.

The Invisalign aligners are easy to clean. You can simply brush them with a toothbrush and paste and rinse them in lukewarm water.

PROCESS OF TREATMENT

This treatment starts with a **free Invisalign consultation**. The dentist will assess your teeth structure and then plan an exact, accurate and scrupulous digital treatment which gives step-by-step alteration to your teeth.

The [invisalign dentist](#) will design your unique aligner after your approval for the plan which you need to wear for at least 20-22 hours a day. You need to change your aligners every 1 or 2 weeks as per the requirement. These aligners will help your teeth to shift and adjust to its exact place, as per your treatment plan until all your teeth are placed perfectly.
