

What Are The Pros And Cons Of Dental Crowns?

Dental crown treatment is an effective restorative option that can restore a tooth with damage, chips, or cracks. It has many benefits that only a crown can give compared to the other options. However, crowns have some disadvantages, and you should consider the best dentist to get the best treatment.

[Dental crown Houston](#) is a part of cosmetic dentistry. Crowns can be used for worn down, permanently stained, mishappen, or discolored teeth. A dental crown helps you get rid of all cosmetic issues. It is one of the most common dental restoration options to make your teeth usually function. A dental crown is a permanent cap that maintains and conceals your chipped, broken, or weak teeth. The dentist customizes [crown dental Houston tx](#), to match the rest of your teeth set.

So now let's look at some advantages and disadvantages of dental crowns.

The Pros

Relieves Pain.

Crowns help relieve the pain you may get from tooth decay or any trauma that can be painful. But with the help of a dental crown, you can alleviate the pain symptoms, inflammation, and sensitivity on the tooth and nearby teeth.

Balancing Bite.

A bite should be correct. It is not only necessary for your oral health but for good digestion as well. The proper bite can chew the food properly and make it digest perfectly. This is also called malocclusion, which

can negatively impact your chewing ability, leading to improper nutritional intake and poor health. Therefore, the crown helps to correct that issues too.

Long Lasting.

Houston dental crowns can last longer than other restorative options. This can significantly benefit your teeth by protecting them from further harm due to tooth deterioration or decay.

Teeth Whitening.

Crowns give you an ever-lasting teeth whitening option. Dentists use porcelain or ceramic to create dental crowns. These materials whiten a tooth with a stain and prevent discoloration as you age.

The Cons

Cost.

The price of crowns can be a drawback. Although numerous variables may impact the cost, such as the type of [Midtown Dental Houston](#) crown and the treatments suggested by the dentist, the typical price is roughly \$1000. Because every mouth is different, it will rely on your conditions. But insurance frequently comes in handy. For more information on what is and isn't covered about dental crowns, consult your provider and policy.

Nerve damage risk.

There are chances of nerve damage if a tooth is filed too thin. In this case, root canal therapy is an option; in the worst cases, complete nerve removal may need to be done. Your dentist will always check thoroughly to determine that your tooth can support the crown before filing.

Sensitivity.

Dental crowns can also cause tooth sensitivity to other teeth if the dental crown is too abrasive. It may wear on surrounding or opposing teeth, leading to sensitivity or even deterioration. Make sure to directly consult your dentist if you feel any pain or discomfort in your crown!

In Conclusion:

Crowns can be a good option for you, so talk to your dentist and make sure that it will go best with your teeth condition. Consult your [**dentist in Houston**](#) and make an appointment now!
