

The bees the cradle of ecology

The bees are faced with many problems of survival , the main reasons are the deforestation (destroyed housing) the use of pesticides bees can be poisoned and /or bees may lose their ability to reproduce and they can also die by predators

The death of bees can have serious consequence decreased pollination of plants bees help to fertilize flowers by carrying pollen from one flower to another this allows the reproduction of fruit disruption of the ecosysteme death of certain plants

to reduce bee loss the use of pesticide must be reduce it would be better to use natural pesticide angrais, we can mak a place reserved for they hive for protect him to the deforestation and the predators,

For stop this go on the street to demonstrate (Monday 7 Wednesday 9 Fryday 11 april 2023 the street of London) We make a website to make a donation for create a place for a bees make a poster and distribute in the street to sensybylise oyhers people

dont forget the bees are a king for ecology kill them anf the planet are by destroyed Dont let to arrive click in the link to make a difference <http://www.donationforthebess.fr/>
