

Polar Bears as been threaten

We want to raise awareness you about te cause of the Polar Bear.

First of all, the principal cause of the disappearance of Polar Bears is the global warming, but the are other causes like the oil pollution, climate changes, hunting, sea pollutions, gas emissions and willow project.

This causes have a lot of consequences like floodings caused by the melting ice, toxic diet by mercure and petrol present in the ocean and they eat this. Next, the climate change provok the mouvement of Polar Bears to the population. Finally, the hunting of Polar Bears was realised to recover they fur and they meat, by fear they defend and want to eat Human.

To defend this cause, we proposed solutions. In a first part, we must reduce the gas emissions and the glob warming, we must to protect the polar environnement, recule plastic and stoped petrol.

To fight the project willow, we must behave with an grant online. This project have for goal to recover all the petrol and this was killed the animals. If we don't behave, Polars Bears was finished to disappear. This have a lot of consequence in the futur.

We want to make a poster to raise awareness the cause of the Polar Bears.

They disappearance was estimated to 26 000, decrease of 30% in 35 years.
