

save the world.

- Global warming is now an overwhelming ISSUE. It is melting the ice pack, killing polar bears, rising sea level, and now, it might flood islands.

- If we don't act, massive storms, floods, tornados will continue to appear, even more frequently, creating larger and larger weather changes.

But you can act.

Short-term solutions :

- Consume less electricity at home
- Use your legs / a bike instead of using a car.
- Consume less water.

Long-term solutions :

- Create councils with presidents and discuss about solutions
- using renewable energies worldwide
- enforce people to recycle by giving them prizes etc.

Together, let's make our world better.
