

Clothes

We are going to talk to you about clothing, consequences and causes that buying too much clothing can cause.

The main cause is that people buy too many clothes because of the fashion which changes a lot and influences many of them.

Consequences are that with the total number of clothes thrown away, this causes greenhouse gases, on average, a French person throws away 12kg of clothes, shoes and household linen each year, then it is people who make the clothes in very bad conditions and *finally it would take about 10 000 liters of water to produce 1kg of cotton fibers forms a t-shirt and jeans.* If you want to fight consequences you can buy less and recycle your clothes.

The main action we create is made a web site who was produce clothes most ecological for the planet, a limit of purchase and with recyclable material.

Clothes was made by person who want to work in that and not person who was exploit for that, and in great conditions.
