

SAFETY RULES FOR CHEMISTRY LAB- CORRIGE

Rule #	rule	details
1	Do not pipette by mouth	Use the pipette bulb or automated pipettor you don't know how clean the glassware really is
2	Read the chemical safety information and follow the recommendations	For safe use and disposal of the material
3	Dress appropriately	Tie you hair back wear safety goggles and lab coat Even if you are not clumsy, someone in the lab probably is
4	Identify the safety equipment	Know the location of the fire blanket, extinguishers, eyewash and shower. Ask for demonstration if necessary
5	Don't taste or sniff chemicals	You are exposing yourself to a dose that can harm you if necessary, use chemicals in a fume hood
6	Don't casually dispose of chemicals down the drain	Some chemicals can be washed down the drain but wash it away anyway so that you avoid chemical reactions between chemical leftovers. Some chemicals require a special method of disposal
7	Don't eat or drink in the lab	It's dangerous
8	Don't play mad scientist	Pay attention to the order in which chemicals are to be added to each other. Don't deviate from instructions
9	Handle chemicals carefully
