

Help to stop Air Pollution

Summary :

1. Causes
2. Consequences
3. Possible Soluces

1. Causes

The causes of the pollution are first factorys with smock, who create massive carbon. There is also the gasoline of vehicles who make too CO² in air.

2. Consequences

The amount of carbon in air make less breathable for the humanity, who make sickness, in prove a risk of life for all and who add an issue for climate change.

3. Possible Soluces

The possible soluces for stop this, stop factorys or filter carbon, plant trees for have oxygen, change gasoline for cars and drive less. Provoc a sensibilisation for factorys to they produce less of massif product.

Join us in a campaign for fight against gasoline and carbon.
