

# THE AIR POLLUTION

Hey , we will like speak to air pollution.

The air pollutions is dangerous because he cause fourth millions premature death , according to O.M.S , 9/10 people breath polluted air and this cost 5 000 billions \$ to the global economy ,less of average life expectancy of 8,6 month in Europe .

The cause of air pollution are increase greenhouse gas emission transport , industry and agriculture like fertilizer or pesticide .

This to create consequences of environmental like global warning or ozone layer degradation who emite ultrapurple ray who is nocif to the living being . Economics consequence with cost of the care and to finish health consequence like invaction or illness of respiration or pulmonary .

If we want to parry all of this we will avoid the cars and the air-plane , wastes , to cut down onelectriciy and to recycle .

For the rescue the Earth of the air pollution we can start by to recycle waste to bike or to move foots.

Thanks for listen us and make the necessary for the Earth planete .See you soon .
