

Act for sea pollution

On the earth, there are many problems of pollution but the main problem is the sea pollution.

This pollution is entailing by the reject of chemicals, plastic, the petrol and the nails.

The consequence of this pollution are the fish who dead because there is infected by petrol and wastes who product by human and throw in the sea.

For reduce the pollution of the sea I suggest in the short time stop to throw their plastic in the sea or in the beach. After, I think to prevent the plastic in the beach. In the long time, recuperate the plastic in the sea for recycle this.

For raise awareness about the sea pollution I create a YouTube channel for announce a action and see videos to advocate and alarm for this action

This 31 march join us for clean-ups the beach of Dunkerque. Partage this information
