

Sea Pollution

There is 4,8 and 12,7 million tonnes of plastic end up in the ocean per years.

The times degradation wide to this item the cigarette 1 to 5 years ,the plastic 10 to 20 years ,the aluminum 80 to 100 years ans plastic bottles 4 centuries.

This cause is climate because warning this ice and pollution by nutrition there are consequences sea pollution little disruption of natural water cycles and destruction of aquatic ecosystem.

In aquatic ecosystem there is fish , plant and sea animals.

For the solutions there is several choose like Waste management , use of clean technologies and Water-treatment.

If you want to react , recycle your waste.

If you want to react , treatment of water.

My action is petition.
