Water pollution : clean ocean !

We want to fight against water pollution because if we don't do anything by 2050, we will no longer be able to drink clean water.

The first cause of water pollution is cruises and big boats because it consume lot of fuel and it's really dangerous and bad for the environment and the ecosystem.

The second cause of water pollution is intensive fishing because it reduce ocean population and it release lot of plastic in water. For example, in 2020, 21% of the 1372 aquatics species in ocean has disappear or is in danger.

The last cause is the illegal chemical release in ocean.

The solution for all of that is the creation of 58000 jobs for collect the waste and clean beaches and for me is to organise more charitate event in the years for collect some money and finance rechearch for find a new source of energy who don't polluate ocean
