

PLASTIC DANGER

I want to talk to you about the plastic pollution and the plastic wastes because today, it's one of the biggest environmental problem in the world.

A lot of things cause the plastic pollution like the overconsumption of plastic packages, there is plastic package under an other plastic package, almost all the packages are in plastic and everytime you buy something in a store, there are plastic bag at the exit to carry the things you buyed. There are also the lack of recycle (40 %of the plastic is used only one time), 1 million

plastic bottles are sold every minute around the world and for exemple 448 millions tonnes of plastic were produce in 2015.

The risks of the plastic pollution are that the plastic will stay in the nature during 450 years, 700 species of marine animals have

already eaten plastic or have been trapped into plastic, it kills a lot of animals.

Also, there are 5000 billions pieces of plastic in the oceans and 73 % of wastes in beaches are in plastic.

To solve this problem, I found a few solutions like sign petitions or do demonstrations to ask at the industry to recycle more the plastic or use other packages and not the plastic everytime. Personally you can use flask against plastic bottles and use reusable bag against plastic bag and do clean walk to clean the street of your cities of all the plastic wastes and other wastes.
