

Plastic pollution

We would like to speak you of plastic pollution.

The plastic pollution is due to excessive production of plastic because making plastic doesn't cost a lot, and there are plastic everywhere (in bottle, packaging, in product disposable and plastic bag...), it's cause by the population who doesn't sort and doesn't recycle their wastes because there is a lack of sensibilisation and education for recyclement.

The plastic pollution has a consequences, like wastes floating in sea this is destructing eco-system (like tortules eats plastic bag because they mix up with jellyfish), and it's have impact in human (ilness, problem of production...), and contaminate drinking water.

For stop it we can stop to consume plastic excessivement, pick up wastes on the floor or just supporte association which fight for stop to polluate.

We think a solution, we can buy a tissues bag for stop to product less plastic and stop the plastic pollution.
