

Plastic pollution

We live in a world where plastic is an issue. With about 310 million plastics in 2016 in the wild. We have to deal with a major case of plastic pollution. If we do not act the causes will be irreversible, between the lives of marine animals in danger at the appearance of the new continent. We can avoid the irreparable by using less plastics or better yet by stopping the production of plastics and replacing it with cardboard.

Join us in our cleanups on march 23, 2020 in Hénin-beaumont at 2P.M.
