

OVERFISHING

Probably you don't know but the overfishing was a massive issue for the oceans and species they lives in !

In fact the overfishing was cause from disapearing lot of species in the oceans because :

In first time the fishermen use electrify fishing net all days, so a lot of protect species of fish and simply fish died everyday inside.

Secondly the fishermen use a big fishing net equipped with big lead balls so this balls destroy the ocean deeps and this is the « house » of a lot of marines species.

In the last this fishing net catch all the fish in his way the protect species and the simply species, when they don't want a species they drop them and the fish died.
