

Action!

Write a leaflet to promote science

YOUR PROJECT

Your class has decided to create a leaflet to encourage other young people to take action for science.

STEP 1

Choose your arguments

- Discuss and list arguments to support scientific research.
- Discuss and choose which important issues must be solved today.

STEP 2

Decide how youth can help

Imagine and discuss actions that young people can take in favor of science, including youth with non-scientific interests.

STEP 3

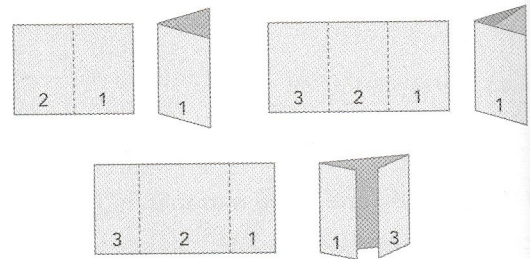

Make your leaflet convincing

- Search the Internet to find examples of scientists who have helped better the world.
- Find pictures to illustrate your leaflet.

STEP 4

Design your leaflet

- Choose a folding scheme. You can use one of the schemes below:

- Organize the information and illustrations. Make sure to use a catchphrase to attract your reader's attention!
- Print your leaflet.

STEP 5

Present your leaflet

Present what you have imagined to convince young people to join the cause for science!
