

# Sea level rise

We have chosen this topic because this topic is very important for us because this cause concerns our generations and if we want change it's now because after their are too late and the world will be endangered for example mean sea level rises by 20 cm between 1901 and 2018 with half of this rise observed after 1980

By the action of heart , continental ice ( accumulation of snow glaciers , polar ice caps) continues to melt this exercees water from the continent is tranferested for the ocean , caresing increase in its level

sea level rise , will contribut to increase increase and sesverty of flooding in low lying areas and increased in its level , if we wantchange the worldcchange the world it's right now because after their are to late

Take action with others we need changed each hobbies of people use more bike and less car we can extand this idea with awerness posters and protest march
