

# Overproduction of clothes

The clothes production is one of the biggest problem in the world . Clothes production is the second spring of world pollution . So we wants to inform us about this problem . Fast Fashion is the principal cause of this pollution , the concept of Fast Fashion is to product fastly and in large quantities . For instance to produce a tee-shirt and one pair of jeans we need 20 000 Liters of waters moreover in general an American throw 37 Kg of clothes in one year . Because of overproduction , the production of clothes have double . More than , the risk of injure is present for people who work in industries of clothes .

So to fight this , we share you soluton . First you can give your clothes at association . Secondly you can buy second-hand outfits . Thirdly you can use with durables materials .Or you can buy clothes in secondhand clothes shop . If you have little broher or little sister you can give your clothes , place of throw . To last you can give your clothes at Homeless . We will make an awarenness campaign in our city to make prevention .
