

Fossils Fuel Shortage

Today, I am here to talk about the fossils fuel shorcase caused by the high energy demand around the world. As we know, fossils fuel isn't unlimited and our future generations will get even more impacted from our actions. It is time to act before it's too late, energy costs are already exploding, the demand is growing more and more as the population grows. It is also an environmental question, fossils fuel makes a lot of pollution, around 37,9 billions CO2 emission in 2018 which is 2.4 times more than in 1970 and the reserves keep getting more rare, that could lead to geopolitical wars around us. Without forgetting that fossils fuels have a huge impact on the econimes for example the price of an oil barrel dropped by 30 %! The biggest issues is surely the fact that we are relying too much on the fossils fuels so if tomorrow we don't have anymore fossils fuel it can lead to a total blackout. If we react now, don't you think we can save humans in general ?

Today's generation should be the one putting an end to it by doing meetings with responsible peoples and telling them to stop relying on fossils fuels but encourage to alternative sources lke solar,air or hydrolic or asking everyone to do something that would have an impact. If we unite, I'm sure it's possible together as a team.

As for today, I will be the one reaching to you. If you want to start something do it now by spreeding this around you and come demonstrate with us on the 18st May at Fouquières-Lez-Lens infront of the church.

Thanks for reading this article.
