

Corail swim dead

I defend massif corail but dead slowly.

The cause are climate change, pollution, starfish, crown thorn prickle, boat drop, oil, warming of sea and the too much tourism on the coral reef.

The consequences are that the coral reef is dead and the food chain is destabilized and pollution continues, coral disappears.

The solutions are to limit tourism near the coral reef and to fight for climate change, pollution.

I will create a poster to inform people and I will create a #save coral
