Today me and my friend want to express a wish and our anger. We want to help people understand that it is necessary to stop certain bad habits of throwing waste on the ground or consuming a lot of polluting product or even trying to save many to maintain our planet .Our topic nulero it water pollution .

Why water pollution?

There are a lot of problème in our océansuch as a lot of differents species : Black seas ; even the tearing the off of certain coraf riefs . For this pollution problème we had the idee of use more tailling thit for fishing .

There are to much wastes . We should be more beenn inthe beach .

CNRSeestimate the numbers of loating plastic waste oin the surface of our océans at 5000 milliards .

If we use tailling there is less oil spillage.

If we fishing less there is more species of fish .
